Financial Analysis

System Design & Performance Tuning

Backend Engineering

Richard M.

Senior Quantitative Software Engineer | Full-Stack AI & Financial Systems | PhD Math Finance & MSCS

United States

Summary

I’m a Senior Software Engineer with a passion for solving complex, high-scale engineering challenges—especially at the intersection of fintech and distributed systems. Having spent over a decade building software, I’ve found that the best systems aren't just built on good code, but on deep analytical clarity. My background in mathematics constantly shapes how I approach software design: I look past quick fixes to design clean, fault-tolerant architectures that handle edge cases effortlessly and scale gracefully.At Stripe and Adyen, my focus has been on mission-critical financial systems where reliability, performance, and security are non-negotiable. Designing payment rails and APIs that handle millions of transactions taught me how to balance speed with bulletproof correctness. Before diving deep into fintech, I spent several years at Eventbrite and RealPage building full-stack applications and backend services, giving me a solid end-to-end view of modern web platforms.Having earned a Ph.D. in Mathematics alongside my Computer Science degrees, I bring a distinct theoretical edge to practical engineering problems. Whether it's dissecting algorithmic efficiency, optimizing transaction pipelines, or reasoning through edge cases in distributed systems, I enjoy applying mathematical rigor to everyday technical challenges. Outside of writing code, I love collaborating with thoughtful teams and mentoring engineers. Feel free to connect if you’d like to talk about system architecture, fintech, or math!

Experience

Stripe

Senior Software Engineer

March 2024 - Present (2 years 8 months)

Magnolia, Texas, United States

Enhanced Stripe Radar, a real-time fraud detection platform, improving risk scoring accuracy and throughput

using FastAPI services, Node.js, and PostgreSQL for high-volume global payment processing.

Adyen
Full Stack Engineer
January 2021 - February 2024 (3 years 2 months)
United States

Enhanced and scaled Adyen&s Payments Platform using FastAPI and Node.js supporting unified commerce
across web, mobile, and in-store channels with PostgreSQL and AWS infrastructure.

Eventbrite
Full Stack Engineer
March 2017 - December 2020 (3 years 10 months)
United States

Contributed to Eventbrite&s event management and ticketing platform using Django, supporting large-scale
event creation, ticket sales, and attendee management with PostgreSQL and AWS.

RealPage, Inc.
Full Stack Developer
September 2015 - March 2017 (1 year 7 months)
Richardson, Texas, United States

Contributed to RealPage's property management SaaS platform using Django, enabling large-scale leasing,
resident services, and operational workflows with PostgreSQL and AWS.

Education

Texas Tech University
Doctor of Philosophy, Mathematics (Specialization in Mathematical Finance) · (May 2023)

Texas Wesleyan University
Master of Science · (August 2013 - May 2015)

Texas Wesleyan University
Bachelor of Science · (September 2009 - June 2013)
